Fuel Change is a social enterprise movement, which taps into the potential of youth to help fight the climate crisis. We unleash the underestimated skills and energy of Scotland's youth by partnering with educators and businesses to help solve their carbon challenges.

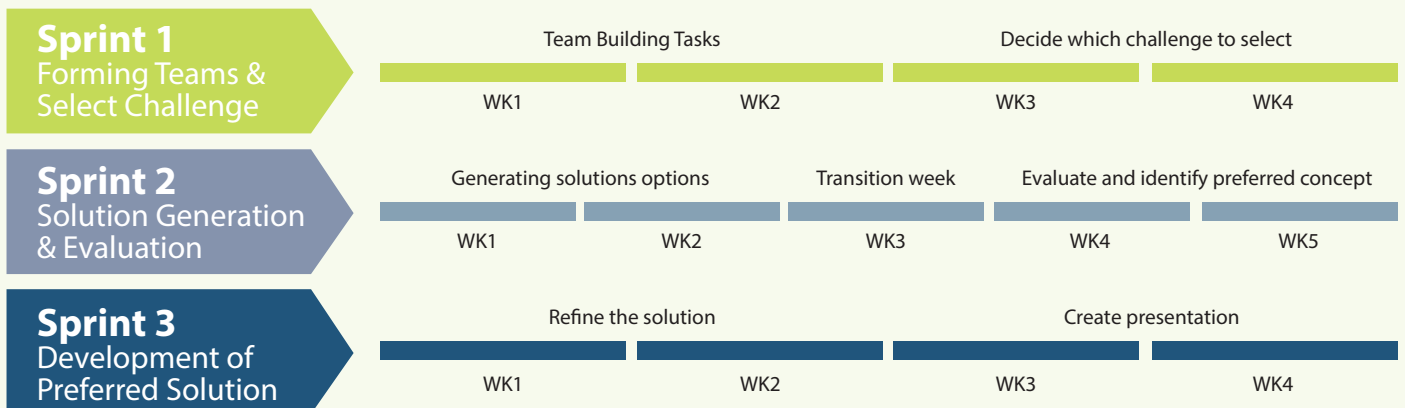

The 'Big Tonnes' Challenge starting 25th October 2021

The 'Big Tonnes' Challenge is Fuel Change's 4th National Challenge, and this time, it focuses on solutions that will influence sectors that have a significant impact on CO2 emissions. The challenges will focus on; Economic Model, Consumer Behaviours, Agriculture, Water and Natural Environment, Circular Economy, and Transportation.

We're asking teams of apprentices and graduates aged 16 to 24 to come up with practical but innovative solutions to climate challenges set by key industry partners. This specific challenge, which will focus on the 'Big Tonnes' will allow the Next Generation to become truly engaged in considering climate related implications.

How does it work?

6 low carbon challenges are set by industry which will be solved by the Teams who will work through a series of three sprints. The Fuel Change team will be available for support throughout Sprint 1 and 2, with a dedicated mentor being introduced towards the end of Sprint 2 to help the teams refine their solution in Sprint 3.

Sprints have built in webinars and support throughout.

What's Expected?

Investment

No financial investment is required. During the sprints, each team will need to spend a reasonable amount of time working together to make a difference. However, we don't expect this to be more than 2-3 hours per week.

This will require commitment from everyone as this is on top of their work based activities.

Teams

Businesses can register a maximum of two teams. Teams can be a minimum of four and up to a maximum of eight young people.

Duration

The three sprints will last around 5 months and after Sprint 3 comes to a close, solutions will be showcased to our panel of Judges.

Why should you get involved?

Benefits for employers:

- Nurture talent within your organisation
- Support your organisations Net Zero plan
- Enhance your company profile
- Improve meta skills to develop your workforce

Benefits for apprentices and graduates:

- Opportunity to make a difference
- Demonstrate and develop skills and talent
- Develop engagement in climate change
- Learn to collaborate and share ideas
- Network and build connections

"It's been an amazing opportunity. Not only did I get to work with other people in my company who I would not normally get to work with as well as networking and being able to speak with other companies, but we also got to focus on trying to do something really positive and looking at how we can make a positive impact."

Bethany Watson, Modern Apprentice, BAE Systems
